

Your current sign lighting may be costing you a fortune without you ever knowing it. Gone are the days of fluorescent bulbs and neon lights. Energy efficient LEDs have quickly become the industry standard - and for good reason. LEDs have a much longer lifespan than traditional bulb lighting, and produce a more pleasing, evenly-lit look. Most importantly, they are significantly more cost effective! LEDs use about 75% less energy to power so - coupled with their longer lifespan and less maintenance - leads to big savings. If your sign is still utilizing inefficient lighting, call us today to discuss retrofitting it with LEDs. Let us help you stop paying unnecessarily high energy bills and start getting noticed.

Costly fluorescent and tube lighting can be easily converted to energy efficient LEDs
